MR. EVERITT
W.H.Croxford, Mechatronics Teacher

Airdrie, Alberta

To Mr. Everitt,

I want to continue with mechatronics because this is something that I can see myself making into a career. I love the challenge that mechatronics gives me. I feel that I have grown as an engineer. Allowing me to expand my skills. From the beginning of the year, I had learned many different skills like coding, physical building of objects that can complete the code, and many other things

I feel like I should continue with Mechatronics because I have gained some great skills. This can allow me to do better next year. I love working with the physical building aspect of the work. I feel like this can be a great experience. Some aspects that I can bring to a leadership role is that I always look for opportunities to collaborate with others, to make things better

I believe that I would be a great addition to the grade 11 mechatronics group. It's something that I would love to have with the abilities in my life. I would love to hear about the mechatronics position. I feel like independent work can be very useful, because to me when I work by myself, it allows me to gain more skills than if I were working with someone else

I look very forward to hearing about the academy, you can contact me at my email address
